

Redux hooks

- create a login/register page
- use the api mocker (<http://github.com/masai-school/api-mocker>)
- use redux with hooks to make all the requests
- use mock server and create the following
- all api calls should be done with thunks
- create a sidebar with user profile details which you retrieve from the api mocker on the left side
- user should be able to logout from the sidebar
- create a new task page
- create an edit a task page (refer create task page, pre-fill information)
- create a summary page
- When creating a task, a task can have tags associated with it. It can be [personal, official, others], and can add multiple tags
- A task has a title, description, and a list of subtask with it, a subtask can have its own status
- A task should be given a category/task_status [Todo, In Progress, Done]
- users can toggle the status of each subtask on the main page, a user can edit the task by clicking on an edit button on the task

User details fetch from api mocker	TODO	IN PROGRESS	DONE
All 4 Personal 1 Official 2 Others 1	<div>Task Personal Date Description <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task</div>	<div>Task Official Date Description <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task</div> <div>Task Official Date Description <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task</div>	<div>Task Others Date Description <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task <input type="checkbox"/> Sub task</div>
LOGOUT			

User details fetch from api mocker	<div>TITLE</div> <div>_____</div> <div>ADD</div> <div>DATE</div>		
All 4 Personal 1 Official 2 Others 1	<div>DESCRIPTION</div>	<div><input type="checkbox"/> Sub TASK I </div> <div><input type="checkbox"/> Sub TASK II </div>	<div>CREATE A NEW TASK</div>
LOGOUT	<div><input type="radio"/> Todo <input type="radio"/> In Progress <input type="radio"/> Done</div> <div>Tag (multiple possible) <input type="checkbox"/> Official <input type="checkbox"/> Personal <input type="checkbox"/> Others</div>		

- use react-router-dom hooks to get everything working

Note:

- useDispatch, useSelector, useParams, useHistory etc to make your application

BONUS:

- use react-spring to make an animation of your choice [keyframes animation](#)
[transform - mdn](#)
